NOTE To simplify reproduction, the letter y has been used throughout the text to signify  $\gamma$ .

## Magnetic Observations at Valentia Observatory, 1979.

### 1. Introduction

Absolute magnetic observations have been made at Valentia Observatory since 1888. An account of these observations during the period 1888 - 1953 has been published by the Meteorological Service [1]. In December, 1952, a set of La Cour Variometers was installed at the Observatory and was recording on an experimental basis during the year 1953. Other new instruments brought into use at the same time were:

- (a) The Copenhagen Quartz Horizontal Magnetometer (QHM)
- (b) The Copenhagen Magnetometric Zero Balance (BMZ)

During 1953, special comparative readings with the old and new instruments were made and an account of this comparison is given in [1].

The data for the years 1954 - 1978 have been published in annual volumes. The present volume contains the data for 1979.

### 2. Site of the Observations

The geographic and geomagnetic co-ordinates of Valentia Observatory are as follows:

Geographic co-ordinates       $\varphi = 51^{\circ}56' \text{ N}$        $\lambda = 10^{\circ}15' \text{ W}$

Geomagnetic co-ordinates       $\delta = 56.6 \text{ N}$        $\lambda = 73.4 \text{ E}$

The height of the station above M.S.L. is 14 metres.

A full description of the site and of the variometer hut is given in [6]. The observing hut for absolute observations has been in use since October, 1956. A plan showing the layout of the instrument pillars in this hut, together with some particulars concerning it's construction, is given in [7].

### 3. Variometers and Recorders

Up to December, 1955, the instruments, installed in the variometer hut, consisted of a standard La Cour 15 mm/hr recorder with a set of La Cour H, D and Z variometers. In December, 1955, a second set of La Cour H, I and Z variometers with a La Cour 180 mm/hr (quick-run) recorder was installed, and has been recording continuously since 1st January, 1956.

A description of the instruments and of the recorders will be found in [2], [3] and [4].

The variometers-recorder lines are approximately along the Magnetic Meridian, the recorders being south of the variometers.

At Valentia, the time marking system in the La Cour recorder has been modified to give lines at ten minute intervals. In addition, a number of alarm devices have been installed to reduce to a minimum the possibility of accidental loss of trace.

A full description of the time marking system and alarm devices is given in [5] and [6].

### 4. Base Line Instruments

Since routine recordings began in 1954 a number of changes have been made in the instruments used for base line determination. An account of these changes and comparisons between the instruments is

given in appendix to [9]. The base line instruments used during 1979 were:

Declination..... Ruska Observatory Magnetometer No. 5917 with  
Lagnet No. 65S

Horizontal Force.. Proton Vector Magnetometer

Vertical Force.... Proton Vector Magnetometer

#### 4.1 Declination

Ruska Observatory Magnetometer No. 5917 has been in use as the standard base line instrument for Declination since 1st January, 1959. Prior to this date, the instrument in use was the Dover Magnetometer No. 139 with Collimator Magnet No. 139A. Particulars of a comparison between the old and new instruments will be found in [8].

#### 4.2 Horizontal Force and Vertical Force

The proton Vector Magnetometer was introduced as a routine base line instrument for H and Z as from 1st January, 1970. An account of the comparison of results obtained with this absolute instrument and those obtained with the relative instruments used in previous years is given in the appendix to [9].

### 5. Base Line Determination

A summary of the base line values, deduced from the observations made with the instruments specified in paragraph 4, is given in Table 1. The values adopted for the tabulation of the records are given in Table 2.

### 6. Scale Values of the Variometers

The scale values for all three variometers were determined by means of the Helmholtz coil, supplied with the variometers. The scale value for the D variometer was also checked by geometric considerations.

The scale values for 1979 were:

D.....1 mm = 0.90

H.....1 mm = 3.65y

Z.....1 mm = 5.60y

### 7. Diurnal Variation of the Magnetic Elements

Diurnal variation data for all days and international quiet and disturbed days for the seasons and the year are given in Tables 8 to 16. The months taken as comprising the different seasons are as is usual in magnetic work:

Winter.....January, February, November and December

Equinox.....March, April, September and October

Summer.....May, June, July and August.

### 8. K - Indices

The K - Indices, given in Table 17, have been scaled, using the procedure recommended by the committee on Characterisation of Magnetic

Disturbances of the I.A.G.A. The lower limit for K = 9 is 500y.

The actual scaled value for K is given without reduction for a presumed solar flare effect.

9. Magnetic Disturbance Data

Tables 18 and 19 give the times of onset, as recorded on the Valentia normal speed magnetograms, of the following phenomena:

- (a) Sudden commencements of magnetic storms or periods of storminess (s.s.c.)
- (b) Presumed solar flare effects (s.f.e.)

Giant pulsations (p.g.) as recorded on the quick-run magnetometer are listed in Table 20.

Definitions and descriptions of the phenomena listed in Tables 18 to 20 will be found in [10].

10. Notes on the Tables

Tables 4 to 6 (incl.)

The hourly values are the mean values for each hourly interval centred at the half hours.

The mean for each day is the arithmetic mean of the 24 hourly values.

The figures for "Sum" are the last four figures of the monthly totals for each hour (all days).

Tables 4 to 7 (incl.)

The international quiet and disturbed days are indicated by letters "Q" and "D" respectively. These days have been selected by the International Association of Geomagnetism and Aeronomy.

Tables 7 to 16 (incl.)

The maxima and minima are indicated by the letters "M" and "m" respectively.

Table 7

The temperature given for each day is the temperature observed in the variometer hut at 0900 GMT.

Table 21

The data given in this table have been adjusted, where necessary, to eliminate discontinuities resulting from occasional changes in base line instruments or other causes. Particulars of this homogeneization will be found in appendix to [9].

NOTE The adopted values as shown above are for periods which are multiples of 24 hours commencing at 0900 G.M.T.

The adopted base line values for the 24 hour period ending at 0900 G.M.T. on 1st January are Declination  $10^{\circ} 39' 6$ , Horizontal Component 19022y and Vertical Component 44372y; for the 24 hour period commencing at 0900 G.M.T. on 31st December they are Declination  $10^{\circ} 39' 5$ , Horizontal Component 19013y and Vertical Component 44397y.
